How can I get a pdf document in a Jupyter Notebook using kable, plotly or pycharm plotly extension? A: If you just want to print to PDF you can do

```
import numpy as np
import matplotlib.pyplot as plt
import matplotlib.ticker as mticker
import matplotlib.dates as mdates
df = pd.DataFrame({'A': np.arange(100), 'B': np.arange(100)})
df.plot()
fig, ax = plt.subplots()
ax.xaxis.set_major_formatter(mdates.DateFormatter('%d/%m/%Y'))
ax.xaxis.set_major_locator(mdates.AutoDateLocator())
ax.xaxis.set_minor_locator(mticker.MultipleLocator(10))
ax.xaxis.set_minor_formatter(mticker.DateFormatter('%H:%M'))
ax.xaxis.set_tick_params(which='major', length=10, direction='in')
fig.tight_layout()
fig.savefig('test_print_to_pdf.pdf',
           bbox_inches='tight')
```
